GULF INSTITUTE

WINNER OF THE AWARD FOR THE BEST TRAINING INSTITUTE IN THE GULF

Certificate in IT Management Processes

Why Attend

- The omnipresence of information technology (IT) across an organization creates a scenario where an organization's success depends on IT success. Consequently, if IT is fragile then so is the organization and its business.
- Very often we hear about failed IT projects, major cyber incidents, and rising costs of IT. Other
 times we hear about outsourcing issues, difficulties complying with regulations or repeated
 audit findings. Common among these issues is that someone, somewhere, left something to
 chance.
- This course gives participants the knowledge to manage IT processes in a robust manner, to seek
 out hidden problems and to prevent these problems from erupting at the most unexpected
 moment. This course provides participants the insight required to strengthen IT, which in turn
 strengthens the organization.

Course Methodology

• This course will be highly interactive with group discussions, case studies, hands-on practical exercises, and group activities being the core focus.

Course Objectives

By the end of the course, participants will be able to:

- Identify IT management processes required by their organization and align these to business objectives
- Apply best practices for defining common IT processes
- Apply management system components to build or improve an IT management process
- Conduct gap analysis on IT process maturity to identify areas that need to be improved
- Perform risk assessments on IT management processes and implement controls to ensure IT management processes achieve the required objectives

Target Audience

This course is suitable for anyone who is managing an IT team or who is responsible to establish
IT processes within an organization. This includes, but is not limited to, Chief Technology
Officers, IT department or team managers, Auditors, Risk Managers, Compliance Officers and
any other professionals involved in defining or leading IT functions, processes and capabilities
within an organization.
