Managing Business Requirements Using a Project Framework

INTRODUCTION

- Successful projects are highly dependent on well-defined and well-understood requirements by all stakeholders and a key measure of project success is stakeholder satisfaction. This includes business / project requirements, process and product requirements and specifications. Investment of time in requirements processes have proven to be key contributors to delivering projects on time and on budget that meet or exceed business requirements. It seems that many organizations attempt to deal with requirements by using different approaches in discovering and defining them and requirements activities as employed in many organizations today are unstructured, ineffective or simply performed incorrectly.
- This Managing Business Requirements Using a Project Framework training course focuses on requirements processes that contribute to project success. Participants will learn and practice defining the real problem, assessing the impact on the project and business and identifying and managing stakeholders' expectations, all in the context of strategic project leadership. The key to this training course is the belief that most requirements can be documented in textual sentences. This is a traditional view of requirements definition and management that, for most projects, is exactly what is necessary to be successful.

OBJECTIVES

- Understand the foundational context of requirements in strategic leadership
- Discover how to properly initiate a project to set the requirements process
- Effectively identify and manage stakeholders
- Gather accurate requirements early in the project
- Manage conflicting requirements from stakeholders
- Understand the difference between requirements and expectations
- Identify how a scope statement should identify requirements
- Develop communications skill to assist in communication of requirements
- Identify project stakeholders and discover and define their real problems
- Realize and uncover real requirements using various methods and tools
- Analyse, verify and validate project requirements
- Refine, manage and control changes to requirements

TRAINING METHODOLOGY

- This Managing Business Requirements Using a Project Framework training course is an interactive mixture of lecture, discussion, activities and practice on certain project skills. It provides definitions, examples, discussion and activities designed to promote skill building with interaction and discussion among participants. Activities and work on practice case studies are used to highlight concepts taught and allow participants to practice new project management skills.

ORGANISATIONAL IMPACT

- Develop foundational context of requirements in strategic leadership
- Identify methods to manage conflicting stakeholder requirements
- Develop a consistent method to identify requirements in a scope statement
- Understand the role of project stakeholders in project success
- Build and maintain effective and efficient project procedures and processes
- Integrate project management functions into the overall mission of the organization
- Develop skills for project leaders which will raise their capability, skill and morale

PERSONAL IMPACT

- Improve performance by learning productive, effective and efficient project skills
- Learn to develop effective project plans in defining and managing requirements
- Demonstrate proficiency to develop project plans and make good decisions
- Understand the value of discovering stakeholder expectations and needs
- Adds personal value and competency for an organizational manager
- Increases the opportunity for complete project success

WHO SHOULD ATTEND?

- This Managing Business Requirements Using a Project Framework training course is designed for anyone who is an acting or aspiring project professional in any sector of industry and/or business, including the service industry. This training course is appropriate for those who have some project work experience or those who desire to learn project skills to be able to better manage their work of requirements. Persons who are members of current teams, business planners, technical professionals, project management professionals and engineers moving into project leadership and executives responsible for managing projects would find this training course valuable.
